

Clay Works & Inspira— tions

IV

— In Europe's heartland Germany, big rocks of clay deposits are dug out of the ground. Trucks come and go, cranes carve into the soil and extract blocks of earth, aged in the time and transformed to clay, coloured through natural oxides deriving from processes in nature. As a natural material, clay is a finely-grained natural rock or soil material that combines one or more minerals with possible traces of metal oxides and organic matter.

Geologic clay deposits are mostly composed of phyllosilicate minerals containing variable amounts of water trapped in the mineral structure. Depending on the nature of the soil in which it is found, clay can appear in various colours, from white to dull grey, from brown to deep orange-red. This is because the physical features of the clay mineral present in any particular soil depend on many variables such as parent material, climate, the geographic position of the quarry, the surrounding vegetation and the length of time over which these factors have operated.

Clay, my earth to connect with

Clay, my earth to connect with

— Clays are distinguished from other fine-grained soils by differences in size and mineralogy. Many different types of clays can be found in nature and they are classified according to their mineral composition and properties. Chamotte, known as calcined kaolin, is the most used variety of clay for manufacturing. In fact, chamotte can be defined as a ceramic raw material characterized by a high percentage of silica and alumina. It can be produced by firing selected clays to high temperature, which are then grinded to specific particle sizes. For this reason, it seems to have «small rocks» inside its texture. It tends to be porous and with a low density. Specifically, it is composed by 40% alumina, 30% minimum silica, 4% maximum Iron oxide,

2% maximum of calcium oxide and magnesium oxide combined together. Its composition forms an ideal basis for further processing typical of ceramic products, such as firing. Moreover, its peculiar composition eases the drying process and prevents excessive shrinkage and defects such as cracking. The coarse particles open the clay body to allow gases to escape.

— Clay has many properties such as high plasticity, shrinkage during drying and firing and impressive hardness after being fired. When still wet, it can be molded to form a shape that it retains while drying. During the drying process, clay loses its original plasticity. However, the clay can still be treated with water so that the shape can still be partially altered. Once the clay is dry, it becomes hard and not pliable and it is ready to be fired to become bisque. Bisque is the name used to define all types of clays that have been fired to become a ceramic. It is different from non-fired clay as it undergoes chemical changes during the firing process: in fact, bisque turns into a permanent shape and cannot be altered anymore. Firing also alters the size of the object made with clay, as the heat eliminates all the water particles trapped in the structure of clay so that the object is subjected to shrinkage.

— Since their first steps, people acquire knowledge through all their senses: in fact, being human means most of all to be alive with all these senses: how we listen, how we taste, how we touch. In our digital world, this kind of knowledge has become more and more important. There is a real need for people to connect with what they can learn from their senses. As a universal prime material, Clay has the power to connect people from across the globe. How can we describe the origins of such connection between the human being and clay? The religious narrative also mentions that man was created with clay. The relation goes back beyond memory, trillion of years ago, when there was Chaos,

from which all living species were created: volumes and mass of material floated randomly in space colliding, breaking into smaller particles and eventually aggregating in bigger entities. Planet Earth and eventually Life were born due to such collisions. The unconscious memory of our origins remains in our nature and, throughout history, it has led humans to relate with clay in different ways: from its use as a building material to its use in pottery and in traditional medical treatments, clay has always been used in the material world we live in. Used by artists, potters, ceramists, there has been an endless rethinking of the use and applications of clay throughout history; from antique Chinese porcelain to today's contemporary vessels, Clay has been continuously put into question and has been used as the preferred medium to express and vehiculate knowledge.

— Prehistoric humans were the first to discover the useful properties of clay. Some of the earliest pottery shards recovered are located in Japan and they are related to the Jōmon. Clay tablets were also the first known writing medium in history. In the ancient cultures which lived in the Mesopotamian and Mediterranean areas, public figures like scribes used to register information by inscribing cuneiform script on clay surfaces. Clays sintered in fire were the first form of ceramic: bricks, cooking pots, art objects, cutlery and even musical instruments could, in fact, all be shaped from clay.

— As building material, Clay is one of the oldest on Earth, together with stone and wood. Between one-half and two-thirds of the world's population in both traditional societies and developed countries still live or work in buildings made with clay, and they often use it for daily necessities.

— Nonetheless, clay has also covered and still covers nowadays a remarkable role in traditional medicine, thanks to its healing properties. In fact, the traditional uses of clay as medicine goes

Clay, my earth to connect with

back to prehistoric times. Nowadays Clay is also used in many industrial processes such as paper making, cement production, and chemical filtering.

— This ‘interwoven’, everyday knowledge survives through the fired objects and clay shapes. Since the 60’s and 70’s of the past century, the rise of industrialized production processes has reduced the quality of what people daily consume in favor of ready-to-use commodities. The reduction of the time of preparation and the increase in the efficiency of production processes made commodities of daily use available for millions of people. However, traceability went lost, and the cost minimization became the basis of the current industrial supply chain: the less expenses, the better. As human nature is flexible, a counter movement came up – for example, the whole food revolution developed in the food sector, where communities started to grow their own vegetables and keep their own animals. The gastronomic fascination about what we use to feed ourselves is one of the biggest counter revolution in the world’s history and shows the critical nature of human beings; taking distance of programmed food processing as an act of cultural rebellion. In the same perspective, we have become extremely sensitive to the materials that play a crucial role in our daily life: the sofa we rest on, the chair we sit on and the table we work and dine on. We feel, touch and use throughout everyday materials – carpet, books, cushion, walls – that make us feel happy – materials we can connect with. With this move away from ‘fake’ materials like plastic, composite, that are not what they pretend to be, towards materials that are what they are – wood, glass, metal, clay- people go back to their origins, to their roots.

For the top terraces of the Bohemia Hotel on Playa del Inglés, Tenerife, Spanish landscape architect Luis Vallejo selected **A80** vases in black anthracite planted with palm trees.

In and around the Filosofia, the bar at Barcelona's Sofia Hotel, groups of A vases at different heights and in various grey shades, planted with *Myrtus communis*, *Westringia fruticosa*, *Verbena bonariensis*, *Metrosideros excelsa* and *Acer campestre*, create intimate spaces on the terrace for guests enjoying a coffee in the early morning sunlight. While in London's St Pancras urban development, larger **A80** and **A120** models are put along Stable Street, to create a green walk way from Granary to Lewis Cubitt Square.

A

A80

A120

For King's Cross, Dan Pearson landscape architects positioned small groups of **A** planters a long Stable Street in order to create islands that guideline the visitor from one shop or restaurant to another. The more attractive the different areas are, the bigger the interaction between people becomes.

A120 and **A80** vessels along the Laagte Kadijk, in front of former brewery Stout & Co, transformed into Delva Landscape Design practice and stylish B&B.

A60 and **A50** in grey taupe color at Sagg Pond residences, Long Island, NY

Bruges is a fantastically beautiful old town — a Flemish Venice with quiet canals, old cathedrals and Renaissance masterpieces. The College of Europe, the main incubator of future servants for the different European Union institutions, is situated here. On the streets, aside from tourists, one will see far less non-European faces than in the average European city. Perhaps the most apt symbol for contemporary Europe are the famously peaceful and picturesque *béguinage* in Bruges, which are home to women, mostly elderly ones, who spend time in self-reflection without being disturbed by the outside world. In the centre, close to the historical Markt and Burg square, 13 architects curated this walled courtyard of a neo-classical building dated from the Dutch period early 19th century. They used Flemish bricks for the flooring and positioned two large Nordic white A-vessels planted with *Acer palmatum*, *Erigeron karvinskianus*, *Asplenium trichomanes* and *Polystichum setiferum*.

The floating office for the Global Center on Adaptation, moored at the Rijnhaven in Rotterdam, is a building for a new era. Off-grid, CO₂-neutral and it floats — instead of flooding — when water levels rise due to climate change.

Both fun and functional, it also forms an important element in a newly redeveloped harbour environment by providing public space on the water - and even a swimming pool. A context ideally suited to the seamless integration of *Atelier Vierkant's* beautiful clay sculptures. The water, the greenery, the clay and the wood form a beautiful poetic story that can be experienced by the many employees and visitors. The tall pots are set with Perzich ironwood (*Parrotia persica*). The trees start out fresh green in the spring and summer and then take on the colour of the clay in the autumn. A perfect, unprecedented synergy between clay, nature and wood is created.

The smaller pots scattered over the decking create spaces and shelter and are occupied by the evergreen *Osmanthus x burkwoodii*, sea buckthorn (*Hippophae rhamnoides*) and the Sand ryegrass (*Leymus arenarius*).

Since more than hundred years Gstaad is well known for exclusive Mountain holidays and a relaxed life style. Refined music, wine and mountain gastronomy lie at the heart of Gstaad society. Artisans retain traditional skills while farmers live off the pastures just like their fore-fathers. Such elegant authenticity was what drew pioneering sport enthusiasts to the region all those years ago.

Now it is the turn of The Alpina to define an era while celebrating the vibrant core of Saanenland culture. For the terraces outside and around the swimming pools, **HBA** chose **A80** and **AH90** vases in black anthracite clay planted with multicolor geranium flowers.

Hotel Marignan Paris five star is ideally located at 12 Rue de Marignan, a quiet street in the 8th Arrondissement, which connects the Champs-Élysées and the Avenue Montaigne, Mecca of Parisian shopping, in the center of the famous 'Triangle d'Or' of Paris. As the hotel sits only steps away from the Grand Palais as well as from many prestigious art galleries, its address has a natural association with both art and culture. The interior architect Pierre Yovanovitch, icon of New French Style, transformed the Hotel Marignan Paris into an island of contemporary luxury, a serene and confidential stop in the heart of the capital. For the entrance, the owners of the hotel have opted for black anthracite **AHS** and **CBH** vases, and some smaller **ZB** seats along the façade.

& finishes

A unique combination of different textures & shapes

— Texture can make or break a structure or building; it is a crucial part of architecture and it has long been used by architects to breathe life into buildings as well as to create a unique experience for occupant's senses, creating pattern or rhythm and allowing the viewer to believe the piece moves through space. In this perspective, textures create a different experience: they allow more than one sense to be used at once by just "seeing" it and ensure the viewer a full sensorial experience. Atelier Vierkant provides costumers with a vast array of 16 different textures that can be used and applied to structures, objects, shapes and forms, as well as mixed and matched with our colour palette.

— Expressing the true quality of materials and shaping an interior space or simply articulating a pattern, texture gives structure and strength to the object. On a finer level of detail, the texture is, in fact, the skin of the pot and the true expression of its meaning as well as of its character. It gives beauty to the shape and emphasizes volumes and plays of natural light on the surface of the vases. The combination between the natural pattern of the clay and the texture chosen creates a unique piece that is linked with the context and with the elements of the surrounding environment in a strong and indissoluble way. The designer's choice is a vast selection of possibilities to combine a model with one of the many available textures, which are indicated in a practical table with a numeric symbol. The reader will find for each model the recommended textures available, and samples of the specific texture can be sent upon request.

Clay Perfumes

— Besides the 9 clay body colours, Atelier Vierkant last year launched 31 new engobe top colours – clay perfumes – which can be applied on the outside of the natural clay.

— Engobe, a liquid clay slip applied on the outside of the ceramic body, is mixed with oxides and fired upon the surface of the pot. The 31 fragrances are used as accents that embellish the shapes and volumes. They often cover partly the model, from time to time entirely, but in most cases their favour mixes with the body of the clay on which they are applied. Engobe applications are done on demand and patterns are customized to order.

— Clay colours and textures can be mixed together, resulting in the widest display of possible choices and combinations and matching each client's expectations in the most personal and unique way.

Clay body Colours

The highly chamotted clay Atelier Vierkant works with is naturally coloured in the mass by oxides and pigments in 9 different shades: Atelier Vierkant's body colours. During the firing process, those oxides are absorbed by the clay body so that they do not fade away with external weather agents – UV rays, rain, heat, frost. Samples of body colours can be sent upon request.

Introducing colour and life. These were the leitmotifs intended by interior designer Séverine d'Alès for the design of this flat in the 18th arrondissement of Paris. In this place, inhabited by a Brazilian chef and her two children, the double living room hosts a grandiose 'workshop' kitchen and a spacious lounge. These two spaces combined become both living and reception areas, in an atmosphere where Brazilian and French cultures are mixed. A colourful place while keeping the Parisian elegance of the beautiful Haussmannian setting. At the entrance to the flat, a pair of **AS130 WW** with **R12** engobe pots house *Sansevieria trifasciata*. In the **Red O** pot in the kitchen-workshop *Strelitzia Nicolai* are combined with the illustrations on the wallpaper that decorates the room like a giant painting. The trio of **FGS** pots in the living room fits in perfectly with the colours and lines of the elements that furnish this beautiful space.

As soon as clients approach Corales Suites in Adeje, Tenerife, they are captivated by the sinuous curves of its massive white contemporary-style building. White models from the **AUB** series are used to guide clients and staff along the wooden pavement of one of the many outdoor passages, breaking the horizontal lines of the grey walls and adding volume through use of texture and the bright white colour. The sense of verticality is created by the upwards motion of *Hyophorbe lagenicaulis*.

Located in Square Edouard VII (Paris 9ème), the project designed by Gabriel Rochard is part of the renovation of prestigious office buildings. The building has undergone a joint renovation of its interior and exterior spaces, with the aim of offering employees and visitors a pleasant living environment, allowing them to reconnect with nature and pursue an exchange in an informal, selective and stimulating manner.

On the second floor, a terrace exposed to half-shade hosts square pots arranged in a rhythmic and sinuous diagonal that marks the separation between the companies located on either side. Subtropical under – growth has been planted here, with a focus on foliage and fragrances.

The owners of a holiday home on a Greek island wanted an interior design that did justice to the rough, Mediterranean hills of the island. *Wolterinck* interpreted this into a design with pure and raw materials, rich in texture and earthy tints. The house itself, built 25 years ago as a third holiday home on the island, leant this way too, with its sober, uneven floors and rough natural stone walls.

Wolterinck introduced furniture made from untreated wood, dark rugs and pieces of art whose shapes, patterns and colours appear wild and picturesque. The lie of the house in the shelter of the rocky slope, looking out of the infinite azure blue sea enticed Wolterinck to make grand gestures: ceramic planters, robust lamps and spacious seating on the patio with austere steel mirrors on the walls. The reflections of the sky and the sea give colour, the cool outside light stands out against the dark grey stones.

BL

*With a total length of over 1,8m,
the BL model is available as a
total installation, as well as in
individual parts.*

More detailed info on request.

Decidedly global in its outlook, the modern metropolis of Singapore has kept a foot firmly rooted in tradition. Today quaint colonial-era shophouses sit alongside shimmering skyscrapers; temples, mosques and churches share the same streets; and open-air food courts sell tasty and authentic fare just footsteps from fine dining establishments. Singapore continues to defy expectations.

The Link Bridge Gallery, between Four Seasons and Hilton Hotel, offers room for temporary art installations. In this setting, the **BL180** is presented with lush green at the background.

BL

For the decoration for the historic Piazza delle Erbe at Riva del Garda, Frizzi Giardinieri selected the **BL** bench in white beige finish with centered **O90** planted with *Pittosporum*.

the product cycle
kept within the
boundaries of
one workshop.”*

Clay Laboratories

ateliervierkant — Collection 2022

— Atelier Vierkant promotes clay to design. They do that in their own unique way without compromise: headstrong, as becomes the Belgians. The handcrafted creations are conquering the world and can be admired in the most exclusive locations. Belgium may be one of the smallest European countries, but despite its modest size, the innovation of its many artistic talents cannot be confined. From fashion to interior designers to top chefs, each and every one understands the art of combining design and terroir, and the results are praised the world round. Belgium has proven itself a design force to be reckoned with at the international level. ‘Made in Belgium’ has evolved into a quality label like no other. Atelier Vierkant does it with clay: clay coming from Western Europe that is transformed into unique handcrafted pots in their Belgian studio, 70 tonnes per week. How does one give clay, a centuries-old material, its own contemporary design personality? There are no standard objects here, only authentic designs of artisanal quality, design pieces with a heart and soul: made by hand, slowly and meticulously. Sleek, but never cold. Two pieces are never exactly alike. Each design that leaves the premises is entirely unique and bears the stamp of its creator.

Clay Laboratories

— Willy and Annette Janssens, the founders and designers of Atelier Vierkant, are endlessly at work in their studio, their hands immersed in clay, rooting and wrestling with this material. It is here that all their creations are born, destined to seize the world by adorning its most beautiful places: from luxurious villas to grand city hotels to exotic gardens. «Clay is our foundation and it is with that material that we begin our journey. We think with our hands and the rest follows.» In so doing Atelier Vierkant is continuously stretching its technical boundaries in order to reach results that hardly seem possible. «The clay consumes us, yet it is we who control it.» It is in that field of tension that exquisite, functional objects come to life: layered, organic and distilled. A robust and proud presence, but never shrill. Architectural, functional elements and artistic sculptures at the same time.

Clay Laboratories

— Even though the design is born in Belgium, the whole world is home for Atelier Vierkant products. The constant strive to create a context where people can connect with natural materials and benefit from a more familiar and not impersonal environment is the reason why Atelier Vierkant pots can be found in the most exclusive locations around the world, creating cohesion and continuity with the surrounding environment and ensuring a superior aesthetical experience. Just as unconventional as their monumental pots, so too is Atelier Vierkant's way of working: no agent, no importer, no adverts. Because what you do yourself, you always do better. Willy and Annette are responsible for the designing of the objects and their three sons do the rest. It's an intensive way to work, but it is the only option. «This is the foundation of who we are». No impersonal offices hermetically

sealed from the work floor, but rather an impressive and lively studio that is the true beating heart of this passionate family business. Atelier Vierkant has a worldwide network of 3,000 architects and designers with whom it closely collaborates creating ad hoc, unique projects. Each collaboration is unique in itself and lead to always unexpected, surprising results: exclusive restaurants in France, luxury Hotels in Barcelona, amazing private houses in New Zealand and much more. We have built strong relationships based on trust with each of these partners. Any calls or queries are answered personally: no expensive, delaying and unnecessary in-between steps, instead just a direct, intensive and close collaboration. «We don't want any middlemen, no adverts. The price is determined by the product and the product only. We want our clients to be happy and stay happy, and that's only possible if you have control of everything yourself. We're always close by». We feel and breathe

Clay Laboratories

our profession which boasts on years of collected and collective knowledge. Therefore, Atelier Vierkant functions as a laboratory, a creative think tank and a production hall where the creative process is always on its way to produce something new and never seen before. We are above all partners; together we brainstorm, we research and carry out the entire project from scratches. It's a matter of matching our objects perfectly with the project they are designed for, both in shape and texture. It's an intense process with continuous communication via Skype, sending samples, pictures and even 3D-printed models. «The kilometres that separate us are inconsequential. We're always close by, whether our client lives and works in Dubai, Singapore or Los Angeles. If an architect or designer rings us, we can let them know right then and there that their pots are just being rolled into the oven. That creates trust.» At the moment, Atelier Vierkant can count on three fully operative workshops. In fact, a new third

Clay Laboratories

plant is fully working and it is now ready to increase the number of pots produced daily and to offer clients even more choice from stock.

— Such expansion is implemented accordingly to the impressive, increasing growth rate that Atelier Vierkant has been experiencing during the last decade. There, a worker stands on the top of a wooden crate, bent over to reach and shape the insides of a mould; another artisan, tool in hand, etches deep ridges onto the surface of a round planter, with hands poured in creamy clay; yet another is busy with rolling out of the oven warm, finished vessels. This is the place where, in fact, clay is transformed from raw material into a finished product with dedication and by hand: clay is pressed, shaped, molded into pots and then fired. Once the clay has adapted to the shape of the mold, the drying process begins: pots are placed under air-blowing pipes, so that the clay can partially release the water trapped in

its particles. This process lasts several days in order to let clay dry and become harder. The pots are now ready to be finished and decorated with engravings and textures by the hands of the artisans working in the atelier, before undergoing the second drying process in apposite drying rooms. After several days in the drying rooms, the pots are fired at 1200°C in special ovens and the clay turns into a permanent shape and cannot be altered anymore. Thanks to the high firing temperatures clay will withstand harsh weather conditions such as frost and heat, becoming suitable both for indoor and outdoor use. The pots are now ready to be packed and shipped worldwide with different means of transport, according to the destination: truck, sea freight or air freight.

— Each passage, every process is made inside the facilities of Atelier Vierkant, without depending on any relocation and offshoring process. This means that the production cycle is

literally kept short, as it takes place in one single location, being sustainable and allowing the full traceability of the product. Moreover, this allows people who work in the Atelier to have deep and complete understanding of production and supply chain process, being more aware of the value-adding aspects characterizing our pots.

— Besides the three workshop plants, Atelier Vierkant showroom offers both private and professional clients the opportunity to see, touch and feel the vast array of models Atelier Vierkant boasts on. The different shapes, colours and structures displayed are able to inspire clients and offer new, different perspectives on projects, putting sometimes in question the already existing plans and opening their creative minds to new ideas. This is the right place where to get inspired by the unique aura emanating from natural clay.

CLG60W17/C/HALF GLAZE

Design Oostende is known for its range of designer furniture from top brands such as B&B Italia, Knoll, Cassina and Vitra. But art gets an important place at DOK. “Art and interior complement each other. A painting or sculpture gives personality to an interior. Behind every work is a fascinating idea or story, just like behind the design classics. We work together with established names such as Raveel, Alechinsky and Panamarenko, but also with emerging talent. Each season, an artist also takes centre stage. The old maritime site where we are located with DOK already has a lot of art to offer. Think of the street art of The Crystal Ship and pieces of the Berlin Wall. Locatelli's work therefore fits in perfectly.”

Hortus conclusus is the archetype of an enclosed garden. A walled garden with a fence enclosure, which became synonymous with the term 'garden' in the Middle Ages. It protects the private precinct from public intrusion, creating a protective barrier, and bringing nature within the walls.

The garden is often enclosed in a courtyard or cloister and carries a deep symbolism, both connected with the garden of Eden, and with the Virgin Mary.

Clay,
Heritage
— Nature
of home

— After your body, your home is the next most personal thing in life. It's a retreat, a place where you should be able to close the door on the rest of the world and feel secure. In times of economic turmoil and political instability, it's been harder than ever to close that door to the rest of the world. Homes have become houses, which in turn have become statistics related to numbers and abstract figures. Anxieties of daily life outside have been brought indoors at a time when we all need somewhere to retreat to more than ever. We build our homes and surround ourselves with objects, materials and furnishings that we trust in; those with which we like to live and connect. We identify with the space in which we live and use home as a shelter to disconnect from an often too impersonal urban context. We strive to create intensely personal spaces where evidence of life brings character and comfort. We don't have to know the owners to see that these are happy abodes. — What's more important, happiness doesn't come from adopting a design-by-numbers approach to building or furnishing. By introducing clay into the realm of furniture with its pots, pebbles and vessels, Atelier Vierkant supports the use of a material that humans have been able to connect with ever since ancient times. The heritage embedded in clay therefore returns in the round-shaped bathtubs, in the complex body

of the stone series, in coffee tables, plates, stools, vases and larger vessels. The imperfections of each shape and piece make it unique and priceless. — Working in clay, letting the rough materials run through our hands, modelling and creating are actions that, as artisans, make us experience the sense of home. «Heimweh», a German word without a proper translation in English, indicates nostalgia and the sense of missing home, the place we belong. We often forget the difference between «knowing something about a place» and «actually being there», experiencing it with all our senses and eventually letting it become a «home» for us. In fact, home is, by definition, the place we belong to, the place we can connect with easily, the place where we work, live, and spend time with family and friends. We feel at home in those places where we can connect with our Heritage and where we revive memories of our ancestors. Instead of fake, artificial materials like plastic and composites which are not what they pretend to be, we move towards materials that simply are what they are: wood, glass, metal, and clay. Thanks to the constant continuity with them, people go back to their origins, to their Heritage.

Clay, Heritage — Nature of home

— The roots of the relation, sometimes synergic and sometimes dichotomic, between man and clay are well described by the words of Edmund de Waal. Edmund de Waal, a British ceramist, artist and author, has developed throughout his life a special connection with clay and ceramic which goes well beyond the boundaries of mere manufacturing transcending the realm of art, family narrative and philosophic and historic research. In his essay *Terra Incognita*, de Waal clearly highlights that, despite its presence in every place and aspect characterizing our daily life, clay is a material that we have always taken for granted, being almost invisible in the most common aspects of society. Just in relatively recent times it has been re-discovered in art. However, in de Waal's perspective, being invisible does not mean being unimportant. In fact, clay has always played a fundamental role in building our practical and artistic notions, and it has been characterized by multiple deep connotations throughout history, sometimes being a metaphor for art itself. In the realm of art, de Waal argues, its ubiquity and its low-profile but constant presence in everyone's common life have been used «as a medium to penetrate mass consciousness and to communicate strong messages».

Clay, Heritage — Nature of home

However, it also true that the boundaries between art and crafts, between practical and artistic nature and between the functional and the aesthetic are blurred and not sharp. In fact, de Waal points out, it was just during the 20's and 30's of the last century that pottery started to be acknowledged as a means through which the artist could express a pure,

proactive and self-renovating art, detached from any intention and form of simulation. Color also was thought as being an integral and indissoluble part of the clay body, not applied afterwards just to embellish the shape but thought together with it in order to propel the expression of emotion, feelings and fascination.

Clay, Heritage — Nature of home

— Terra Incognita also explores the biblical origin of man, who was born and shaped from clay. The idea of clay as human flesh inspired the common imagery and metaphor of the human body as a clay vessel, where the sounds of your vital functions are echoed by the shapes of its shell. As sculptural, resistant material, clay can also be seen not just as a metaphor of human body but also as something that humans strive to shape at their will, sometimes struggling with it in the actions of cutting, shaping, molding the material in an artificial shape. The fascination we have with this material comes indeed from its dichotomic nature and its versatility to be either art or craft, or to be both at the same time, and it will never fall out of fashion because Clay embodies both our inner and external world.

Atelier Vierkant launches the Embrace Seat, where a volume of clay meets wood. Both sourced in the Lowlands, these prime materials are brought together in a balanced marriage of L shapes that fit one into another. Designed by *Stéphanie Busard*, a master in letter cutting, an ancient craft specialised in carving letters into hard surfaces like wood and stone. Designing letters is all about curves and reliefs, a practice Stéphanie carries with her in sculpting pots. Like her colleague at the workshop Annette, Stéphanie prefers exploring the material, its complexities and potential, along the way.

In both the single seat and the long bench, Clay marries Douglas Fir, an evergreen conifer species in the pine family, *Pinaceae*, and native to western North America. The model is seen as a continued effort to combine two natural materials – a research that started from the **ZS seat** in 2010, continued in the **ZB**, then took maturity in the **Alph Series** and now comes to completion.

The Port House is the head office of the Antwerp Port Authority. Designed by Zaha Hadid, who died unexpectedly a couple of months before completion of the building, the new building symbolises the dynamic, reliable, ambitious and innovative nature of the Port of Antwerp. It is the daily workplace of 500 employees of the Port Authority and it acts as a meeting place for the many international contacts.

Architect:
Zingg Gartengestaltung

View at lake Zurich, Switzerland — When I think back about the time when I was planning the now finished garden in the Zurich Oberland, a quote by Frank Lloyd Wright immediately comes to mind: “Nature provides endless inspiration. Her riches are greater than any human can long for.” Fundamentally, nature and architecture are actually contrasts - each house and each garden is an interloper - however much it tries to adapt to its environment. So during the process of design, I always feel responsible for connecting humans, nature and garden architecture and for creating softly fluid transitions to the various living spaces. This means creating from the outset a harmonious whole including the house and garden with personality, proportions, materialisation and colour concepts.

Exterior spaces emerged which open onto breathtaking views into the mountains with light-flooded terraces and unappealing spaces perfectly concealed with the right selection of plants. *Pinus sylvestris* Watereri, *Cornus kousa* Milky Way, *Acer palmatum* Ornatum, *Rho- dodendron yakushimanum* Koichiro Wada and the ornamental grass *Molinia caerulea* in planters form groups and families which offer wonderful contrasts to the crisp lines of the architecture. *Amelanchier lamarkii*, used for screening purposes, provide a shadowy retreat at the back of the house, which is inviting with its water feature, even on hot summer days. I am delighted to have created a garden which is enjoyed and used by the family and thus contributes every day to its members' quality of life.

HVO is based in Oordegem, a small town placed right in between the three Belgian cities, Brussels, Antwerp and Gent. Establishing themselves up in a country where the people are known to be ‘born with a brick in their stomach’, hinting at their level of investment in real estate and furniture in general, has of course been helpful for a business specifically directed towards outdoor design. “Despite the fact that we create outdoor spaces, our work is more like an interior designer than the one of a landscape-architect”, says Saskia de Mits, “We take everything into account, the architecture, the landscape, the customers’ taste and wishes, and from that, we design and decorate outdoor **HK** living spaces.”

STAM is the Ghent city museum. It presents the story of the city of Ghent. A permanent circuit leads visitors along a chronological trail of objects and multimedia which trace the development and growth of Ghent. Temporary exhibitions explore the concept of 'urbanity' from different angles. STAM's real showpiece, its raison d'être, is the city itself. A visit to the city museum is not complete without a visit to Ghent.

Clay,
a journey of
Sustaina-
bility &
Durability

— We have always been working with clay, a natural material which is as simple as strong and robust. Produced thanks to hand made work and acquired know-how, Atelier Vierkant pots are made to last. In this perspective, our products are made to last for a lifetime, and oppose to the consumistic, short-term trend our society is characterised by, according to which products are made to last few years before breaking and being thrown away in the garbage.

Clay, Sustainability Durability

Clay, Sustainability Durability

— Thanks to such consciousness of long-term perspective, our pots, pebbles and benches become companions, friends that acquire personal meaning with time and that are inserted in the narrative of a place, having something to tell about your garden, your house and keeping the memories of these sites.

— Each pot of Atelier Vierkant is unique and tells a different story. This is true also for the entirely hand made clay pots of Atelier Vierkant. Their natural connotation implies the communion and the conjunction of the four natural element our world is made of- earth, fire, air and water. Earth and water recalls the physical status in which we find clay; air relates to the drying process in which air-blowing pipes partially eliminate the water trapped in clay particle; fire refers to the firing process of clay, in which pots and seats are rolled in to gigantic ovens and fired at extremely high temperatures. However, these elements would never become something concrete without the addition of a fifth element, which allows them to become a finished product of outstanding quality: human passion. Passion for what we do and for what we can produce with our creativity and inspiration. In fact, the story our pots tell is a narrative made of inspiration, but also of perspiration. Thomas Edison said it best: « Genius is 1 percent inspiration and 99 percent perspiration ». It is true that it is always creative inspiration that leads to genuine, frankly contemporary designed pots. But the execution requires a lot of efforts and sweating. The synergy between

inspiration and perspiration often works well: inspiration strengthens perspiration, while perspiration nurtures inspiration. In this process dedication, discipline, organization and a lot of hard work are indispensable elements. We have developed and perfected traditional skills and special production techniques. This allows us to maximize the this synergy realizing the forms that creativity has imagined and demonstrating that at Atelier Vierkant the art of craftsmanship is not dead. Instead, arts and crafts are at their best.

— Durability does not only refer to memory and to the narrative of a place. Instead, it also refers to physical durability. Natural clay, fired at 1200°C°, can withstand different harsh climate conditions such as frost and heat, and resists to UV rays. This means especially that the shape will not be subjected to alterations and that colours will not fade away. This is the reason why our pots and seats are chosen to enrich beautiful gardens and outdoor areas all around the world, in different atmospheric conditions, and this is also why it is extremely common to see our vases covered with soft snow or our pebbles silted in warm sand: from Hawaii to Saudi Arabia, from Japan to Spain.

Clay, Sustainability Durability

HVO pushes the standards of outdoor living, both in terms of service and design. Choosing to work with pots from Atelier Vierkant was a decision based purely on aesthetics: ‘They are beautiful, that's it’, asserts Saskia de Mits, ‘They simply bring the terrace to a higher level; when the pots are not yet installed, something is missing.’ As clients sometimes tend to forget pots in their initial brief, HVO always includes samples from Atelier Vierkant to give an idea of what clay’s colour, materiality and presence add to the surroundings. ‘We carefully explain how these pieces are made and how valuable the craft behind them is – even the crates they arrive in are handmade!’

Custom and on demand *Clay* projects

— The term customization derives from the latin word *consuetudo*, *consuetudinis*. Its meaning has been subjected to different variations throughout the centuries: from the original meaning of *habitual practice*, it finally adopted the meaning of *made to measure*.

Such measure refers to the need and to the taste of each individual, who is unique and who has exceptional desires and preferences.

Custom and on demand Clay projects

— Atelier Vierkant embraces each individual's idea, inspiration and project designing ad-hoc shapes, mixing colours and structures in order to meet each customer's ideas, making each pot and vessel personal. In fact, the clay labs in Ostend offer the designer and the architect the possibility to give shape to his or her ideas. In the workshop directed by Annette Lantsoght, all the aspect of the project, from the colour to the shape and to the texture are discussed and tailored in order to match and complement perfectly the broader architectural context of the project. The malleability of clay, moreover, allows also the creation

of unique pieces that go far beyond the strict sense and function of a vessel or a seat, such as walls and gigantic shapes. Custom designs are first assessed in terms of technical feasibility and aesthetic. Then, a miniature prototype is created and eventually the piece is reproduced in its real volume and size in order to create the mould. The custom works described in the following pages are just few examples of a vast array of tailored, on-demand works that Atelier Vierkant creates in collaboration with a multitude of architecture and design practices around the world.

Custom and on demand *Clay* projects

CUSTOM WALL PROJECT IBIZA

— *Sa Ferradura Island*, one of the world’s most luxurious private islands, is connected to Ibiza by the small beach of Pas de s’Illa. The project, which consisted of the total refurbishing of an existing house and its garden, was carried out by Romano Arquitectos, an architecture and design studio based in Ibiza.

The volume and the footprint of the construction had to be respected due to the specific environmental restrictions of the area coastline, landscape protection, wildlife preservation.

— At the entrance to the house, a more exposed spot on the island, Atelier Vierkant oversized clay pieces are placed

as strong elements that would recuperate the essentials of the house, leading the guest to the main door. Their custom-made work that Atelier Vierkant produced is unique in terms of size and shape, and the grey nuanced colour variation constitutes a unique pattern thought to complement in a perfect way the architecture of the residence as well as the surrounding natural environment.

In fact, the base greyish tone melts easily in the landscape with direct references to the grey of the rockery and of the cliffs.

— Atelier Vierkant deployed its “savoir faire” and its creativity. Together with the studio Romano Arquitectos it was possible to build a teamwork that would resolve the whole challenge in its complexity: developing the concept together, adapting the studio’s ideas to the specific technique of the ceramic, finding the right textures and tonalities, studying together the composition of the wall and resolving technical issues – exposures to intense 160 km/h winds. The organization and the coordination with local teams to arrange the transport logistic accounted also for a challenge won thanks to a good team work: bringing the 36 units of 2,30m through the narrow and bumpy dirt road was not as easy as it seems.

V-PALM SPRINGS

— V-Palm Springs outstands in all its uniqueness from the most part of the hotels in the area thanks to its original design and the peculiar role that landscape architecture plays in this project. The design and architecture studio Surfacedesign took a lead in planning all aspects of the exterior resort areas collaborating with Roy Asaro for the design of the lobby building. Moreover, Surfacedesign worked closely with the City of Palm Springs design review commission and with Filament's operation program to provide a free-spirited and relaxed destination connected to its surroundings. In creating the hotel's many unique design motifs, Surface-design focused on finding inspiration

sourcing from the cultural history and natural setting of Palm Springs. — The architects provided the team with design cues intended to integrate the client's objective to create a sophisticated and lively destination in the desert. For the entrance, the architect created together with the clays laboratories of Atelier Vierkant a wall of «togetherness». The V-sign, graphically decomposed in different lines and grey tones, is painted in a liquid clay and repeated throughout the wall, conveying a sense of rhythm to the pattern. The positioning of the clay custom-made blocks at different depths illustrates how a static wall construction can turn into a dynamic play of volumes and shades.

Custom and on demand *Clay* projects

Custom and on demand *Clay* projects

INSTALLATION OF CURVED CLAY WALLS DOMAT / EMS

— Located on the right bank of the Rhine river in Switzerland, Domat/Ems is a municipality in the Imboden Region in the Swiss canton of Graubünden. Most areas are forested and embellished by beautiful rivers, glaciers and mountains. The traditional allure of this township is enriched by a contemporary-style roundabout which contains a sculptural structure in the centre, transforming the feature into a unique piece of art in its own right. Tanja Casparis, creative leader for the landscape design company Zingg and author of several projects involving Atelier Vierkant's products, utilised her experience in exterior design and architecture to create a functional structure that optimizes the available space and highlights the potentials of the area while preserving its link to the surrounding natural environment.

— The tailored project conceptualised for this roundabout indeed takes inspiration from the cold colours of grey and green as well as from the shapes of the rocks of the mountains typical of the

Alpine environment. Backed by the suggestive and massive mountains covered by forests of evergreens, several huge, rectangular blocks of grey clay with rounded bases stand curved into a circular formation. Nonetheless, the modern shapes of the structure strongly hint at the area's Alpine cultural heritage.

— The imposing clay formation is engraved with the city blazon and the name of the municipality, evoking an image of the famous Dreibündenstein, a marker erected at the intersection of the Three Leagues. The letters as well as the blazon were individually designed and engraved in the clay with extraordinary ability by the hands of the artisans working at Atelier Vierkant. Their experience in moulding perfect curves and shapes allowed them to create a play of different thicknesses and layers allowing the natural light to highlight the contouring lines of each letter and line in the city's coat-of-arms, thereby adding depth and rendering them bolder and more visible to incoming visitors to the city.

CUSTOM ENGRAVINGS AND CARVINGS IN CLAY

— The dimension of custom work at Atelier Vierkant is not only confined to shape, colour and texture: it includes also a refined work of engraving. In this way, suggestive phrases and elegant logos are carved permanently in the clay, allowing the utmost personalization of objects and creating the strongest bond between our products and the meaning that people attach to them. From evocative words engraved in pebbles, to exclusive logo carvings in the pots of an elegant beach club up to refined miniatures performed on massive clay roundabouts, the hand-crafted inscriptions and engravings amplify volumes and the play of light and shadow on the clay surface. The tailored engravings, both coloured and not, are performed at the Atelier by the hand of Stéphanie Busard, who deploys all her creativity and knowhow in order to match each commissioned work to the project's aim and philosophy.

Since 2018, with the renovation of Rue Mstislav Rostropovitch near the Batignoles quarter in Paris's 17th arrondissement, residential buildings and company headquarters have been built. These make up a new eco-district to which Place des Fleurs has contributed multiple times, in the development of gardens of co-owned properties but above all for balconies and terraces, with 180-degree views running along the Montmartre hill to the Eiffel Tower.

RBC is a closed pedestal.

The geometric pattern created by the vertical and horizontal rims and contour is recalled by a dimensional, squared customized bench in clay, based on the **RBC** model and placed at the center of one of the courtyards that embellish the hotel. The overall linearity of the environment is broken and softened by the slender shape of verdant and fawn Japanese Maple *Acer amoenum* cv. *Sanguineum* at the centre of the bench surrounded by Crape myrtle *Lagerstroemia indica* L, giving a sense of height.

RBC

Bonhommes wants to convey the feeling of carefree living in the quiet, peaceful and natural surroundings of Meigem. It also dares to refer to the Latem School, which is just around the corner. Andy Baudewyn, co-owner of Bonhommes, selected a diverse range of vessels to decorate the exterior courtyard and the two lofts. **UM** vases in cork with specific glazure pattern planted with *Quercus ilex* were commissioned to order, and a circular bench in the centre of the space was produced on demand around a Pine Tree. Inside Andy chose for a colorful display of **CC**, **CLG**, blue **GR** and bordeaux **SP** vessels

Belgian product designer, *Roel Vandebeek*, examines and works on the intersection of design and architecture. Surrounded daily by architects in his studio collective near Maastricht, he is confronted with their continuous requests and challenges. In the research of adaptable and portable pots, Atelier Vierkant and Roel Vandebeek decided to cooperate, combining their shared interests. As part of the 2021 collection, Roel presents an innovative series of planters, half wire, half clay. Lightweight, these planters are easily moved around and therefore particularly convenient for apartments, limited sized spaces or anywhere with a specific need for flexibility. The transparency of the wire leaves room for light to shine through, provides airiness and spaciousness to an extent where even the ground underneath the pot is taken into consideration.

Clay, my
connection to
the world —
Products for
a lifetime
made by
happy people

— *Francisco* moved from Tenerife to Belgium 7 years ago and he has been working as an artisan at Atelier Vierkant since then. Energetic and positive even early in the morning, he starts telling me his daily life. Every morning his alarm rings at 6 am, when he wakes up and prepares the breakfast for all his family. «By 7.15 I drive with my car to Bruges, where I pick up some of my colleagues. Starting a day in company is always good: we have nice talks in the car, we listen to the radio ... ». Once arrived at the Atelier, the daily routine starts: first check to the drying room at 8 o'clock, and then, hands in clay, molding pots. «After the working day Francisco takes the colleagues back to Bruges and goes straight back home «to my family». «Coming home is always another good part of the day, because it allows you to stay with your family, to share our stories and to tell each other our day. Of course, also family time requires a tight schedule to respect: bringing my daughter to ballet and music classes and driving her back home afterwards... »

— Besides working life and family time, cultivating his own passions and hobbies and finding time to dedicate to them is crucial. In fact, having a healthy balance between work, family and free time is a fundamental aspect to take into consideration. That is why Francisco does not renounce to his hobbies, trying to fit them in his already very busy agenda. «My hobby is playing volleyball. Even if it's tiring, I believe that it is important to cultivate your passions and to find time for yourself and for what you like. That is why during the weekend my family and I organize activities to do all together, enjoying some calm before the beginning of the week».

— While talking about his time at Ateleir Vierkant, Francisco takes a look at the production plants visible from the office where we are having a chat and recalls his first days at Atelier Vierkant.

Clay, my connection to the world ...

« When I started working with clay, it was a totally new element for me and establishing a feeling with was not an easy job. I remember Willy came to me and said that in order to understand clay I had to feel my actions from inside, I had to feel what my hands were doing when they were busy in the clay. At the first moment, I didn't really get what he meant, but two years later I started realizing that the only way a pot can be made is through your intuition ». In fact, the natural origin of clay does not allow the existence of neither a perfect formula nor a fixed rule to make the perfect pot: the best way is to feel with your senses and to adjust the way of working accordingly. « This is what I like of clay, that it is a relationship that refines and improves with time. The more you know about it, the more it feels natural and innate to you to work with it ».

— There are several aspects that can be appreciated of his job, among which the most important is the sense of responsibility concerning everyone's tasks and his duties. « What I really appreciate is the fact is that responsibility allows you to be flexible: the presence of a precise task to achieve allows you to adjust and to organize your schedule according to your needs, managing time in the way it fits for you. I think it is a good method to achieve good results and to keep a proactive attitude towards what you do ». Of course, sometimes there are challenges to go through: « Sometimes it's difficult to look after all the responsibilities you have at once: you're always too busy! That is why organization and good communication among colleagues is crucial in order to achieve the results expected and to ensure excellent coordination ».

Clay, my connection to the world ...

— *Marta* is 26 years old and comes from Poland. At the Atelier, she is responsible for the creation of the many textures decorating Atelier Vierkant pots and vessels. «I moved to Belgium 4 years ago with my husband and I have been working at Atelier Vierkant for almost three years and a half». Everyday *Marta* wakes up at 6.30 in the morning and after a quick breakfast she is already in the car on the way to pick *Marta*, her colleague, up to go together to the Atelier: hands in clay, finishing structures and textures, her working routine starts. Passion for details and for decorations have always amused *Marta*. «After work I really enjoy dedicating myself to my favourite hobby, which is making handcrafts with paper, such as boxes and greeting cards. After work, she always finds the time to call her parents via Skype and share with them her day. Even though my family lives far away, I met a lot of wonderful people at Atelier Vierkant. Thanks to the constant team work and cooperation, everyone shares his own history and his own ideas. We are different from each other, but it is such difference that makes our team so strong. At the atelier difference and cohesion are what makes me feel like in a small family».

Clay, my connection to the world ...

— When Marta came to Belgium from Poland, clay was something new for her to work with. But as all the new things, she found the art of pottery amusing and fascinating. It is really true that clay somehow reminds us of our roots and heritage, bringing sometimes some sweet memory with it. «It reminds me those moments when, as a child, I used to play with plasticiens». Many years later, Marta found herself enjoying the same amusement creating the textures and the structures of the pots and checking if customized items are done properly. «My passion for manual precision works found a new way of expression in clay works. I feel good working with the small rocks in the structure of chamotte, because they ease the creation of many combination of textures. I enjoy modelling its uneven, coarsed composition which makes textures unique, especially in black and red clay». The sense of mutual responsibility given by the constant team work at Atelier Vierkant is also an aspect that enhances collective learning and share of knowhow.

Clay, my connection to the world ...

SP50/BL1 + GLAZE

The introduction of engobe surface finishes, and the option to apply the '*Clay Perfumes*' to a big variety of models, broadened the ways the Atelier could express the different natures of clay.

The launch of the **SP** vase — that comes with a two-directional texture and an emerald green or admiral blue colour finish. Originally designed as a flowerpot, they can be used without plantation, as iconic object, or filled up with dry leaves or branches.

Kåseholm Slott

— On account of the unique experiences provided by the evocative setting of Kåseholm, and due to the plenitude of untamed nature that surrounds it, the estate was chosen to host and to present Atelier Vierkant's new collection. These shapes, patterns and colour matches perfectly blend with the renovated indoor and outdoor areas of the estate. The term that best describes the newly created vases is 'experimentation'. New ideas and inspiration have been materialized in the form of colour experimentation, daring shapes and innovative decorative patterns as well as textures. From the long, thin cylindric shapes of CD and CC models to the cut, oblique lines of FG and the unique shape of CS which vertically combines two different-sized cylinders, Atelier Vierkant's Kåseholm collection has a unique impact on the surrounding environment not just by complementing and enriching it but above all by introducing pieces that stand out as masterpieces in the art of pottery. A completely renovated colour palette explores the pastel shades of sage green, pink and light green, creating chromatic combinations that highlight the shapes and the sizes of the new models.

— The extreme versatility of clay is fully seized in the daring shapes of CS, composed by two cylindric shapes. The smaller form creates a base upon which a larger clay structure is placed. The unusual shape gives pots an enhanced sense of verticality in line with the impressive height of the wooden structure, which used to be a massive haystack warehouse.

— Nonetheless, their overall height is counterbalanced by the pattern of horizontal, regularly-placed severe lines decorating their surface. The intense burgundy, brick red and grey of the colour palette recall the tints of the surrounding wooden structure and of the stone floor, while the tender shades of green and white succeed in creating an evocative chromatic contrast, further enhanced by the alternated stripes of the pattern and the rough horizontality of the texture.

— The three-dimensional sense of volume is fostered by the cylindrical shapes which resemble the soft haystacks of the background. It is also reinforced by the tints seen in the inner-surfaces of the pots, which contrast with the external decorations and accordingly convey an enhanced sense of depth.

— Experimentation is further pursued in the search for unusual yet harmonic sizes, complemented and highlighted by thoughtful colours and textures. In this perspective, different degrees of thickness have been adapted to the tiny size and rounded lines of CS and CSD in which the pattern of two different overlapping cylindrical shapes is repeated on a smaller scale. The horizontal, striped texture and the neutral yet vivid colours emphasise the volume of the rounded shapes of the model, resulting in the unique accordance with the coexisting classical and modern vibes of Kaseholm.

— Another strong link to the many pieces of art decorating the indoor areas of the manor is produced by the cut-up, broken lines of FG that immediately recall the sloped lines of the modern painting behind them. Nonetheless, the two-dimensional pattern is enriched by the rounded, conical shapes of the vases, giving volume to the area. This particular colour combination partly plays off of a soft chromatic contrast, maintaining its natural artistic continuation while also allowing the models themselves to stand out as unique pieces of art. More neutral colour combinations

in the tints of grey, creme and taupe blend with the colour of the walls and create a contrasting link between the facade and the light brown of the parquet, enhanced by the oblique shapes that break the overall horizontality of the room. — Cylindrical shapes are used as additional inspiration in the creation of CD model vases. Here, the common theme of experimentation plays a major role in the shape and texture, and a lesser role in the choice of colours. The horizontally stretched cylindrical silhouettes characterising the vases, coupled with the thin slot on the top, allow the natural light to penetrate, creating a scheme of shadows and lights that stresses the depth and plasticity of the clay bodies. This unique and innovative shape is linked to the natural, striped texture of the wooden elements behind it through their shared earthy, yet sophisticated, streaked textures and the grey-ish and brown shades colouring their surfaces. — The delicate lines of elliptical, sloped CC models provide geometric variation to the pattern of rhythmic, horizontal lines provided by the floor and the plastered skirting. The delicate colour palette is thought to provide a strong hint

at the tints of the modern picture on the wall, thus blending harmoniously with its lines and colours. — The journey in shape and colour experimentation continues with the D series vases, which deploy their potential in their striped pattern and one-of-a-kind shape. The combination of tints is meant to create a narrative that links the vases both to the renovated style and to the refined colours of the manor and of the surrounding natural environment where sage green, grey and shades of brown can be found in the rocks, fields, and trees. In this perspective, natural tints and sophisticated patterns intermingle to enhance the unique D-shape of the vases.
